TODHUNTER
INC.

119 East 57th Street ~ New York

COLONIAL HARDWARE

HAND wrought period hardware is an investment paying big dividends in both service and satisfaction, and in addition, its use considerably enhances the value of your property. It has been graphically described as "staunch and as full of character as a Pilgrim Father, with a similar austerity which time has made picturesque."

Hand wrought hinges, thumb latches, shutter hooks, etc., contribute in no small measure to the individuality and distinctive appearance of the home and no other hardware is as effective for the Colonial or Early English house.

The interest of hand wrought hardware, particularly the Colonial on account of its simplicity, lies not only in the design, but also in the character of the workmanship and surface texture.

This important feature, however, cannot unfortunately be indicated in a catalogue.

Our hardware is not stamped out or trip hammered, but is forged in the old manner by skilled smiths thoroughly familiar with the early Colonial metalwork, reproducing the original pieces with a fidelity which makes it hardly possible to distinguish the new from the old.

We can now supply these authentic reproductions of early craftsmanship at practically the same cost as stock hardware and you can obtain it with equal facility—it is *not expensive*.

All pieces are put through a process to make them rust resisting and black finished, and are supplied with the necessary hand hammered head screws. On special order it can be supplied half polished or in cast brass in antique finish.

This catalogue has been arranged so that selections for an entire house may very easily be made by reference to the index below. Essential sizes or descriptions not given under the illustrations, will be found on the accompanying price list. Being hand work, slight variations may be found in sizes given.
